

# HomeKit Quick Start Guide

## GETTING STARTED:

Before connecting to HomeKit, please ensure your Wireless Link PRO Hub and motorized shades have been setup and are working from within The Shade Store app.

You will also need a Matter-compatible, HomeKit hub/smart speaker already linked to your Home account.

To control shades with Home, you will need the following:

1. Wireless Link PRO Hub that has been set up.
2. Working shades within the Shade Store App.
3. Home app and Apple ID account.
4. A Matter-compatible hub/smart speaker set up.

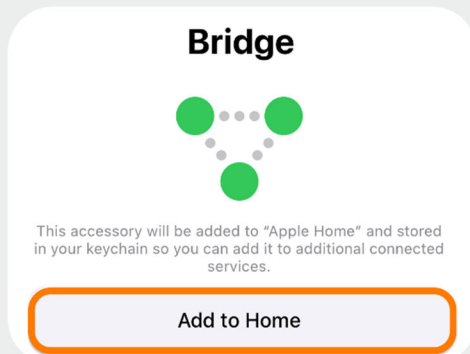

### 1. In the **Home** app, select **+** and then **Add Accessory**.

### 2. Scan the **Matter** QR code found on the bottom of the **Wireless Link PRO Hub**.

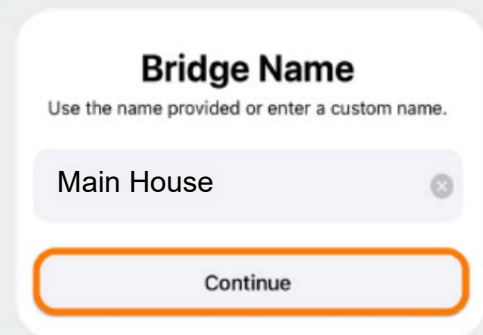

### 3. Select the option to **Add to Home**.

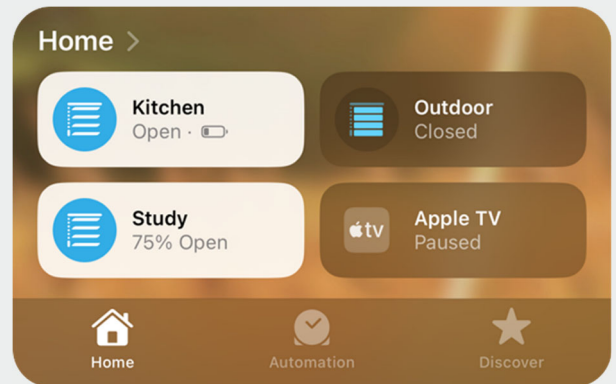

### 4. Choose a location for your Wireless Link PRO Hub and then select **Continue**.

### 5. Name your Hub and then select **Continue**.

### 6. You'll see the shades on the **Home** page; you can control them from here.

### 7. Test voice commands. Example commands:

- "Siri, **open** kitchen shade"
- "Siri, **close** den blind"
- "Siri, **activate** bedtime automation"
- "Siri, **raise** the blackout shade"
- "Siri, **set** bedroom shade to **22%**"

### HomeKit Automations:

Please note that **Rooms**, **Scenes**, and **Timers** set in the **Shade Store App** do not carry over to HomeKit. **Automations** can be created in HomeKit to achieve similar functionality. For more details, visit [support.apple.com](https://support.apple.com) and search for **Automations**.
